Preliminary results on the **full LEP2 data set**

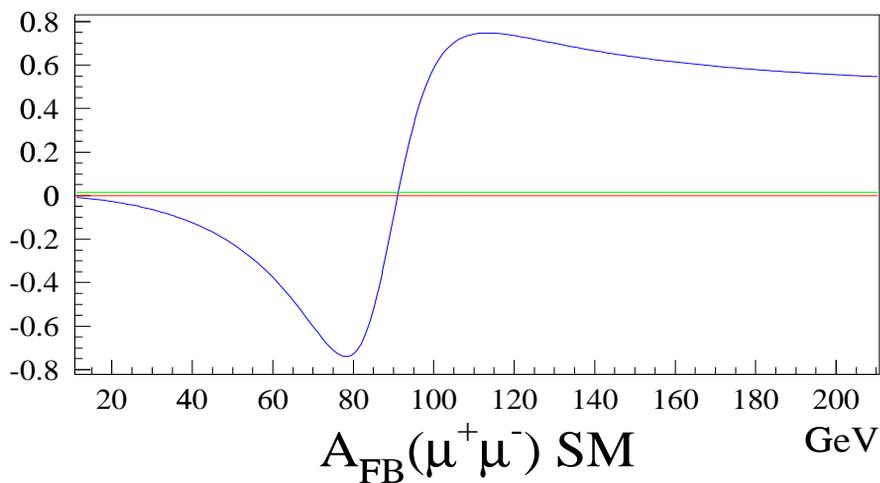

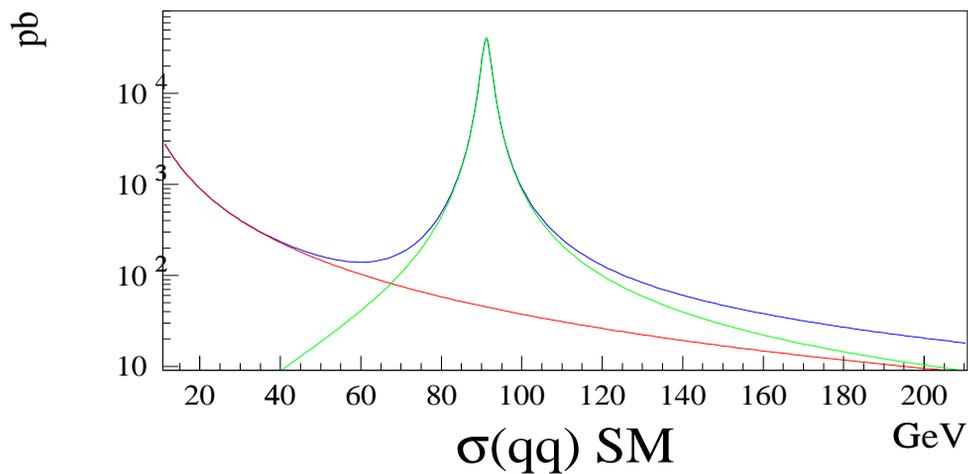

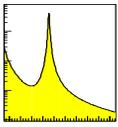

Fermion-pair Production

D. Bourilkov

$$\frac{d\sigma}{d\Omega} = |\gamma_s + Z_s + \text{elec} * (\gamma_t + Z_t) + \text{New Physics ?!}|^2$$

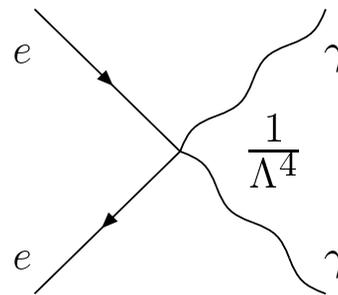

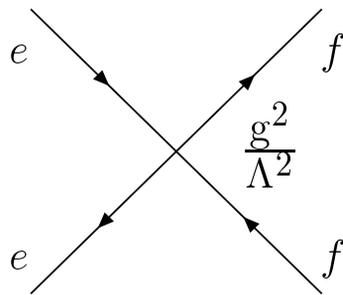

general framework for a new interaction with typical energy scale $\Lambda \gg \sqrt{s}$; operators with canonical dimension $N > 4 \Rightarrow$ coupling $\sim 1/M^{N-4}$

g coupling (by convention $\frac{g^2}{4\pi} = 1$)

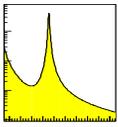

$|\eta_{ij}| \leq 1$ helicity amplitudes

$\varepsilon \frac{g^2 \text{sign}(\eta)}{4\pi \Lambda^2}$ for $f\bar{f}$ $\sim \frac{1}{\Lambda^4}$ for $\gamma\gamma$

$$\frac{d\sigma}{d\Omega} = \text{SM}(s, t) + \varepsilon \cdot C_{\text{Int}}(s, t) + \varepsilon^2 \cdot C_{\text{NewPh}}(s, t)$$

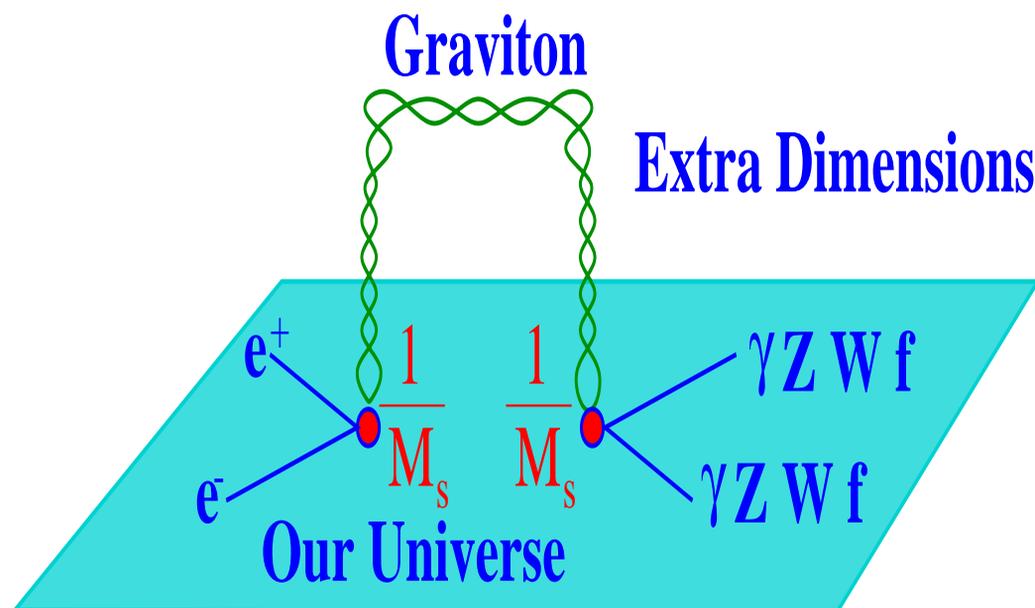

Model	LL	RR	LR	RL	VV	AA	LL+RR	LR+RL

Better understanding of space-time?

Maximum phenomenology with minimum parameters

Study quantum gravity at colliders

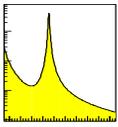

Fermion/Boson pair production - Virtual effects
class of theories with virtual graviton exchange
(KK excitations) \Rightarrow effective scale (cut-off) M_s

Guidice, Ratazzi and Wells; Hewett; Rizzo; Agashe and Deshpande ...

Results are model-dependent: $\frac{\lambda}{M_s^4}$

λ not known exactly \Rightarrow assume $\lambda = \pm 1$

- massive string mode oscillations (TeV strings)

Accomando, Antoniadis and Benakli; Cullen, Perelstein and Peskin

dimension-8 operators - M_S - string scale

LSG scale $M \sim 1.6 - 3.0 M_S$; $\frac{M}{M_S} = \left(\frac{1}{\pi}\right)^{1/8} \alpha'^{-1/4}$

String form factor

$$\mathcal{S}(s, t) = \frac{\Gamma\left(1 - \frac{s}{M_S^2}\right)\Gamma\left(1 - \frac{t}{M_S^2}\right)}{\Gamma\left(1 - \frac{s}{M_S^2} - \frac{t}{M_S^2}\right)}$$

$e^+e^- \rightarrow e^+e^-$

$$\frac{d\sigma}{d\cos\theta} = \left(\frac{d\sigma}{d\cos\theta}\right)_{SM} \cdot |\mathcal{S}(s, t)|^2$$

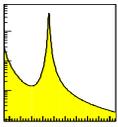

$e^+e^- \rightarrow \gamma\gamma$

Drell's parametrization (QED cut-off)

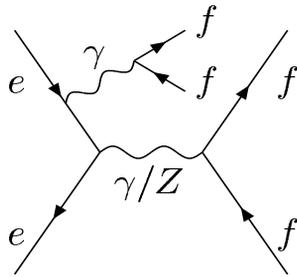

$$\Lambda_+^{\text{QED}} = \left(\frac{12}{\pi^2}\right)^{1/4} \cdot M_S = 1.05 M_S$$

- D3 and D7 brane models - can give dimension-6 operators ! Antoniadis, Benakli and Laugier ...

contact interactions induced by massive string oscillators - can be stronger than KK states or winding modes

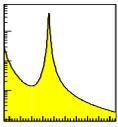

- Interplay between 2-f and 4-f events; radiative corrections, real pairs

low mass fermion pairs are signal, like photons

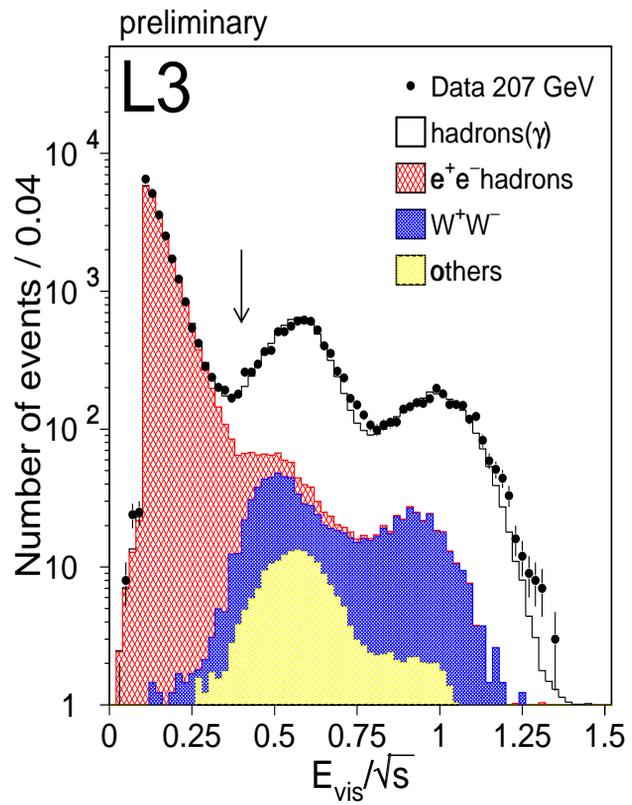

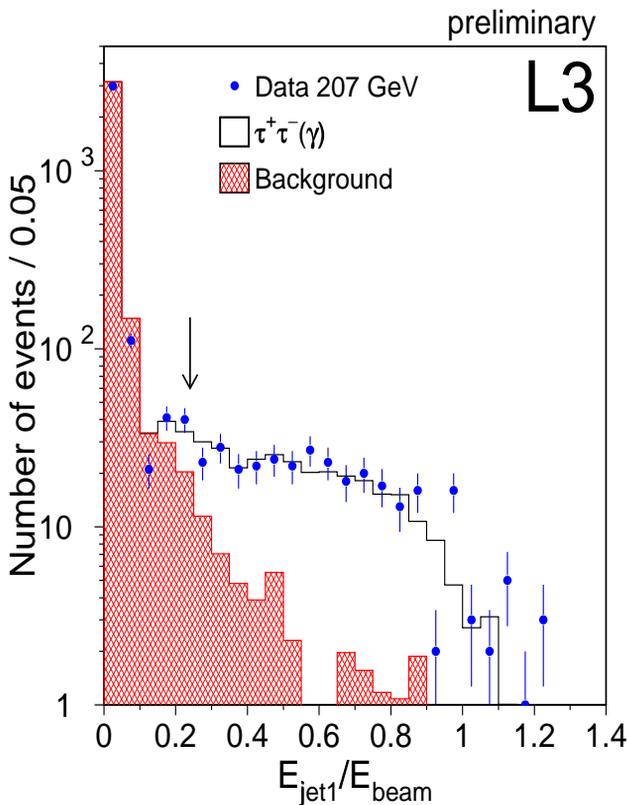

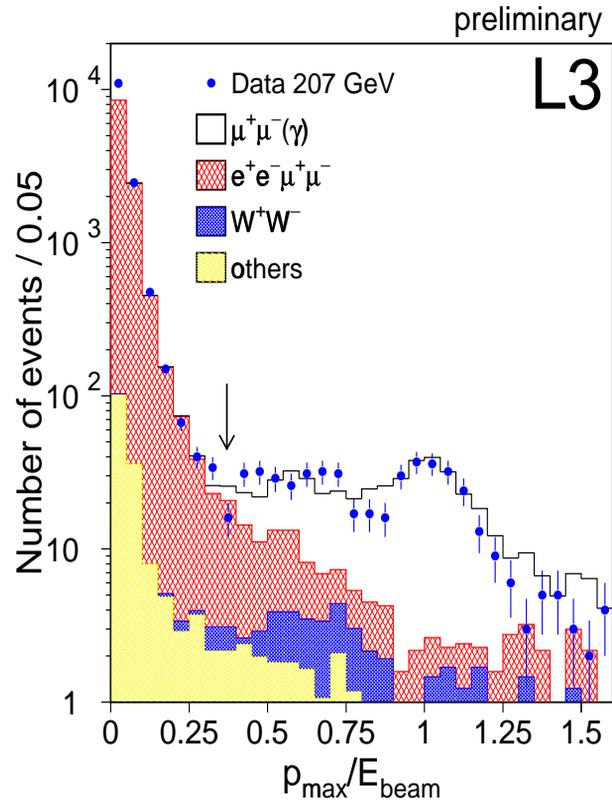

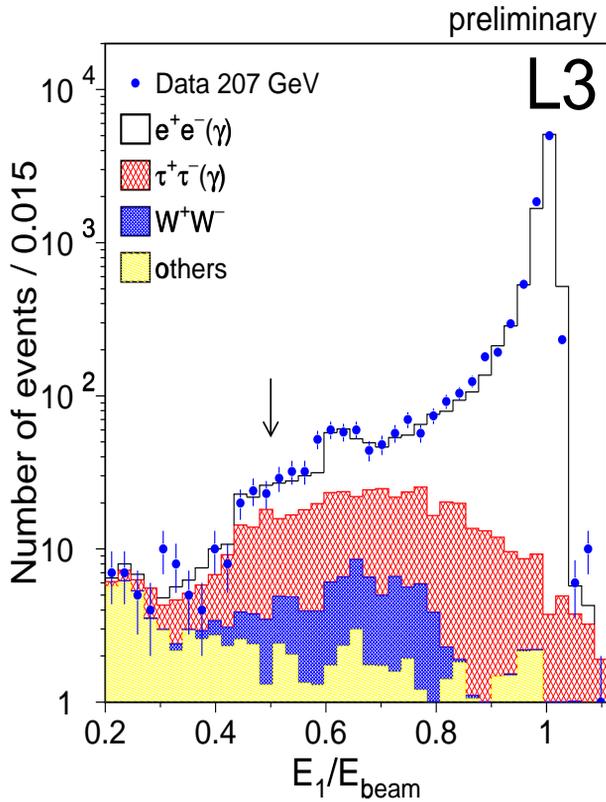

- Definition of s' : not unique due to interference between initial- and final-state radiation
 - interference changes the cross-sections: for $\sqrt{s'}/\sqrt{s} > 0.85$ by $\sim 1.5\%$ for $\mu^+\mu^-$ and $\sim 0.5\%$ for $q\bar{q}$ in $\mathcal{O}(\alpha)$ (efficiency changed by $\leq 50\%$ of this)
 - correct or define $\sqrt{s'}$ as the effective mass of the outgoing fermion pair
- Rising 4-f background
(W^+W^- , ZZ , $Z e^+e^-$, $W e\nu$, ...)

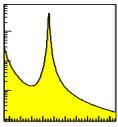

LEP2 Monte Carlo Workshop - Two-fermion Working Group, CERN-YR-2000-009, hep-ph/0007180

Fermion Pairs - Selection

D. Bourilkov

Combines the measurements of σ_{tot} , A_{FB} , R_b ,

R_c and $\frac{d\sigma}{d\cos\theta}$ for:

$\mu^+\mu^-$, $\tau^+\tau^-$, $q\bar{q}$ final states

performs combined fits for **contact interactions**
and Z'

Note LEP2FF/01-01 for Winter Conf. 2001

Combination of the LEP II $f\bar{f}$ Results

LEPEWWG $f\bar{f}$ Subgroup

Abstract

Preliminary combinations of measurements of the 4 LEP collaborations of the process

Future plans: combine e^+e^- and $\gamma\gamma$ final states

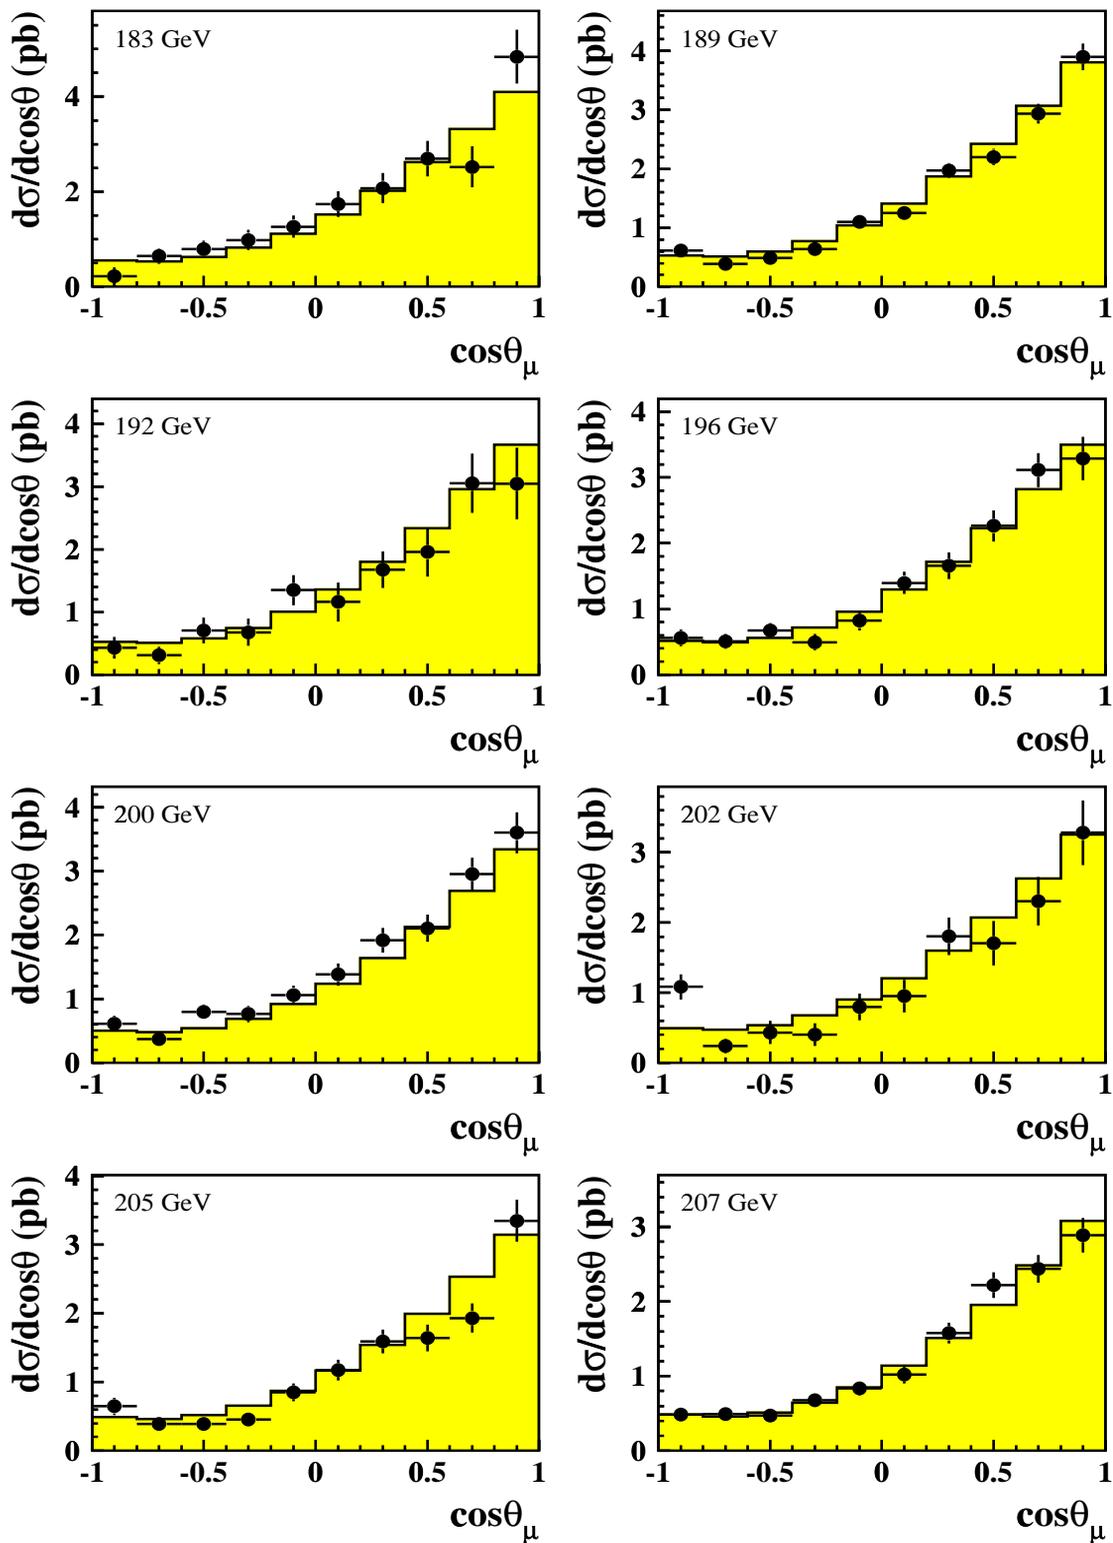

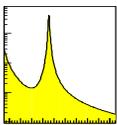

Fermion Pairs - $\frac{d\sigma}{d\cos\theta}(\mu^+\mu^-)$ *D. Bourilkov*

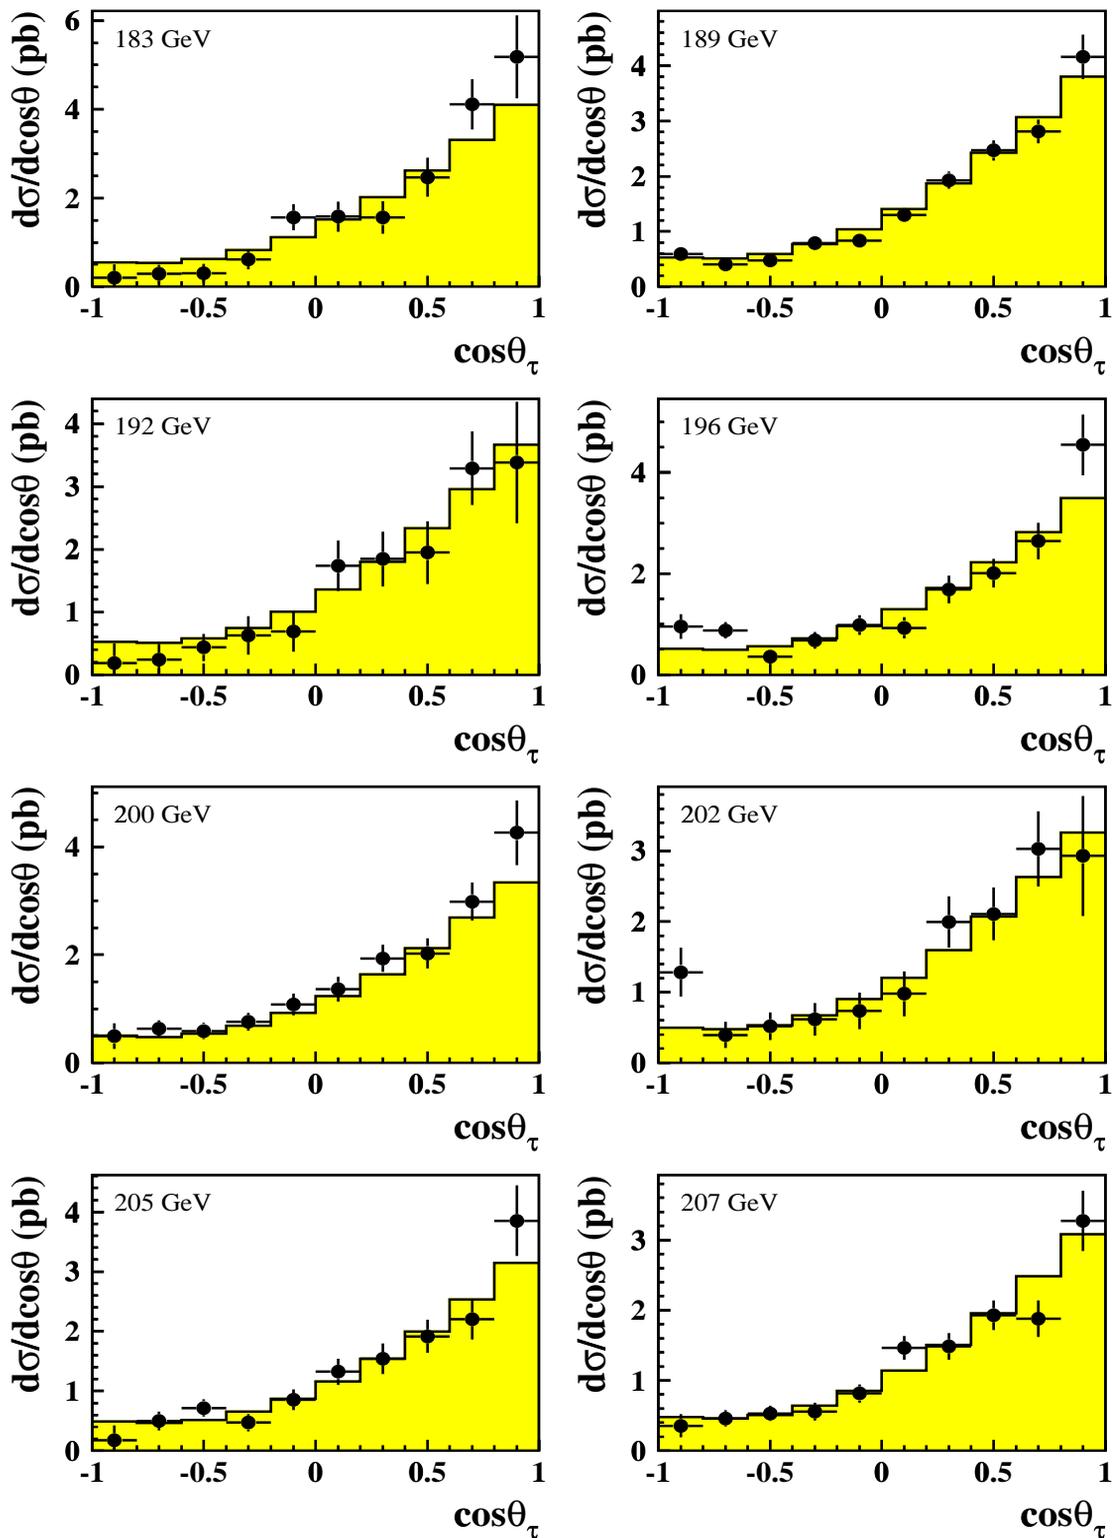

Preliminary LEP Averaged $d\sigma/d\cos\theta$ ($\mu\mu$)

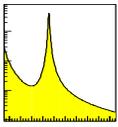

Fermion Pairs - $\frac{d\sigma}{d\cos\theta}(\tau^+\tau^-)$ *D. Bourilkov*

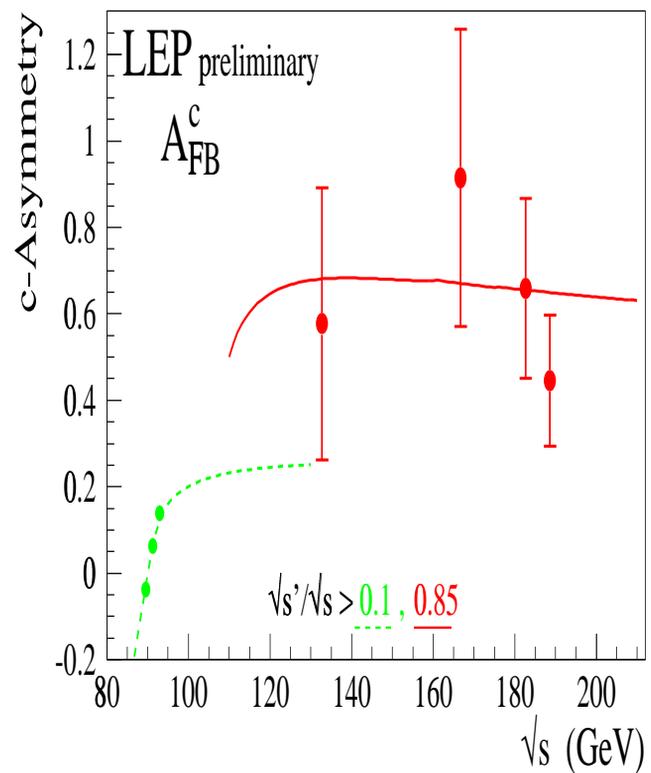

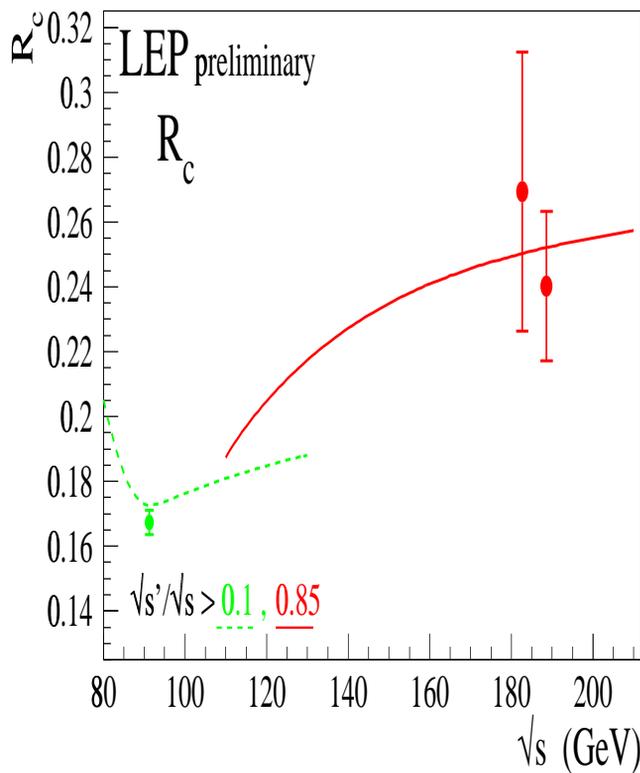

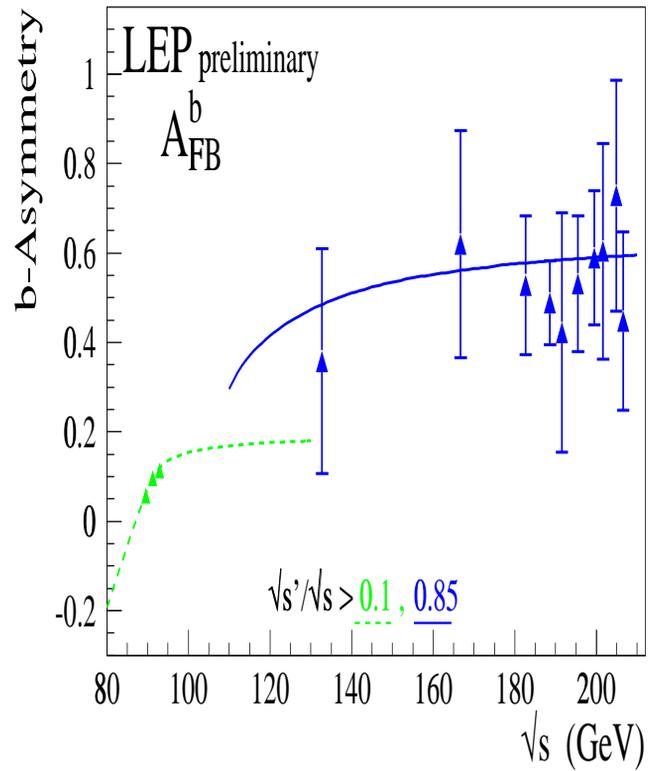

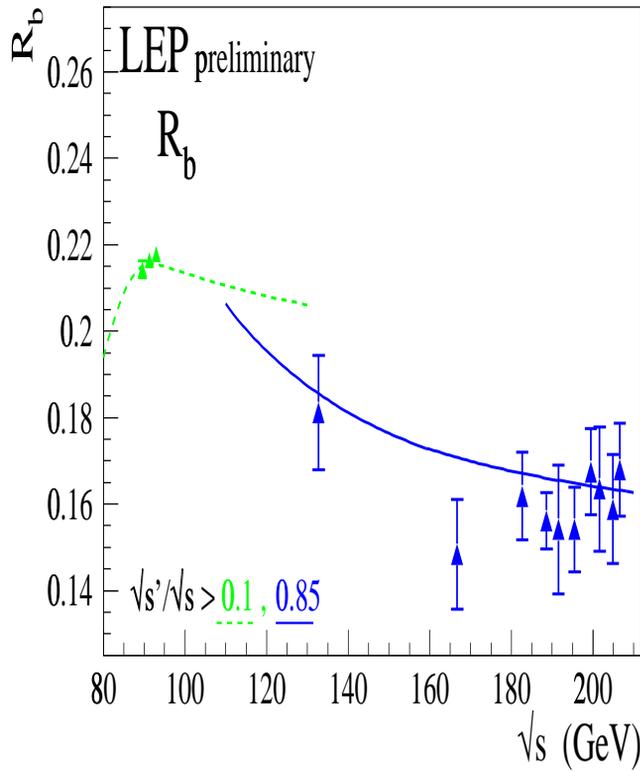

Preliminary LEP Averaged $d\sigma/d\cos\theta(\tau\tau)$

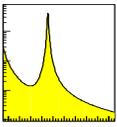

$f\bar{f}$ - Heavy Flavors

D. Bourilkov

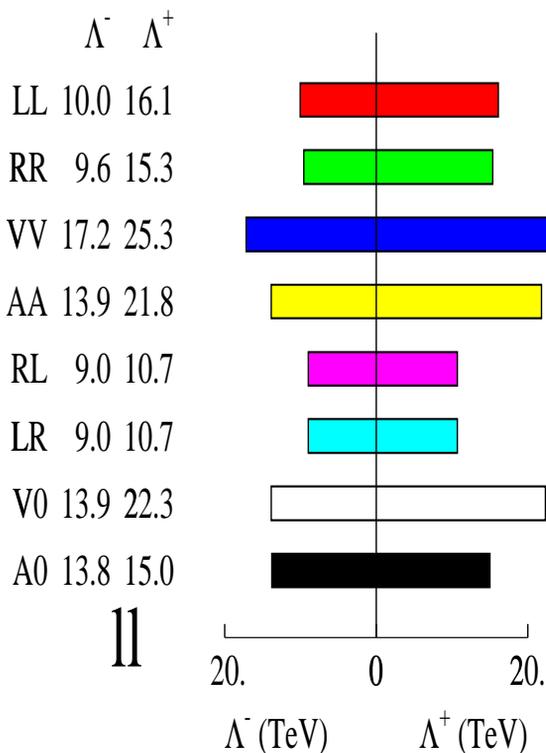

Contact Interactions

- ♣ the Standard Model has no difficulty to describe the full set of precise LEP2 measurements from 130-209 GeV (results at 192–209 GeV preliminary)
- ◇ the extra dimensions remain hidden so far ... in spite of sensitive searches!
- ♡ many new limits (TeV scale!) for physics beyond the Standard Model
- ♠ thanks to the 4 LEP collaborations for providing their results
